

Hosted Microsoft Exchange®

Boost your team's productivity with corporate-class email

Is it time to graduate to corporate-class email? Look to your trusted IT partner!

Microsoft Exchange®, the worldwide standard for corporate-class email, is finally available to your business as a reliable and powerful cloud service. If you're ready for a true success-driving upgrade, look to local IT experts who you know and trust. Not only do we know Microsoft Exchange®—we also know you and your business. That means we can help you understand how Exchange can be a valuable, integrated tool for making your business more successful.

We'll show you how you can leverage Exchange as a cloud service to enable you and your entire team to access and share email, tasks and calendars and more—from virtually anywhere, via browser or virtually any mobile device.

Depend on our knowledge and experience to manage your cloud services, so you can manage and grow your business!

Now you can have the “enterprise-class” communications advantage

Microsoft Exchange® is the preferred email platform for the world's most successful and quality-minded corporations. Now you and your team can play on the same advanced communications field, but without the servers, administration, software updates and other overhead costs those large companies have to pay.

That's because we host it and manage it for you. So you get all the communications features and productivity advantages that give big companies an edge – but at a low monthly cost and no capital investment.

It taps the full potential of your Microsoft Outlook® 2010 – and helps you connect your entire team

Consider all the Outlook functions that help you stay organized and work more efficiently: your business email, your contact lists, your work calendar, your task lists and your remote access. With hosted Microsoft Exchange®, your Outlook 2010 and Outlook 2011 for Mac suddenly becomes a unifying communications environment for everyone in your business.

Access, share and work – from anywhere

You and your workers can keep pertinent information at your fingertips through smart phones or other mobile devices, or by using Outlook Web Access from any computer with an Internet connection. You can share Outlook calendars, contacts and tasks across your organization, from virtually anywhere – reducing administration time and making it easier to coordinate schedules and find contacts. That can make your business more productive, and more responsive to your customers, even when your team members are on the road or working from home.

Schedule Meetings and Appointments

The Scheduling Assistant automatically suggests the best time for a meeting when given a list of desired attendees. No longer is it necessary to make phone calls to determine co-workers' availability for a meeting or conference call. An intuitive color-coded interface gives you precise information so that you can schedule things efficiently and get on with your work.

Organize and Share Contacts

Contacts in the company directory can be centrally maintained for sharing throughout your organization and can be downloaded and used throughout all versions of Outlook. Distribution lists also can be centrally shared and maintained to facilitate communication to groups such as departments or customer lists.

Document Management

SharePoint Server 2010, which is offered free with our Group Plans, dramatically streamlines the process of managing the access and use of your critical business documents. It includes all the features required for effective document management, from defining what template to use for each kind of document, to controlling access to a document at each stage of its life cycle. Most important, it's highly flexible and easy to use, enabling everybody on your team to take advantage of these capabilities without having to depart from their day-to-day operations and familiar Microsoft applications.

Task Management

Hosted Microsoft Exchange® enables you to create and assign tasks to others, and tie tasks to email notification and calendars for basic project and personal time management. You can track progress as a task moves from active, to complete, to overdue, while managing the status with the person responsible and the type of task it is.
